This report focuses on the global Marine Navigation Systems status, future forecast, growth opportunity, key market and key players. The study objectives are to present the Marine Navigation Systems development in United States, Europe and China.

Marine Navigation Systems consist of Chart Plotter and Electronic Navigation Chart. A Chart plotter is a device used in marine navigation that integrates GPS data with an electronic navigational chart (ENC). The chart plotter displays the ENC along with the position, heading and speed of the ship, and may display additional information from radar, automatic information systems (AIS) or other sensors.

An electronic navigational chart or ENC is an official database created by a national hydrographic office for use with an Electronic Chart Display and Information System (ECDIS). An electronic chart must conform to standards stated in the International Hydrographic Organization (IHO) Publication S-57 before it can be certified as an ENC. Only ENCs can be used within ECDIS to meet the International Maritime Organisation (IMO) performance standard for ECDIS.

In 2017, the global Marine Navigation Systems market size was xx million US\$ and it is expected to reach xx million US\$ by the end of 2025, with a CAGR of xx% during 2018-2025.
